COMPETITIVE EXAMINATION FOR RECRUITMENT TO POSTS IN BPS-17 UNDER THE FEDERAL GOVERNMENT, 2001.

PURE MATHEMATICS PAPER-I

MAXIMUM MARKS: 100

TIME ALLOWED: THREE HOURS

NOTE: Attempt FIVE questions in all, including question No.8 which is COMPULSORY. At least select TWO questions from each section. All questions carry EQUAL marks. **SECTION-I** 1. Prove that any group G can be embedded in a group of bijective mappings (a) of a certain set. (10)Prove that the number of elements in a conjugacy class Ca of an element (b) "a" in a group G is equal to the index of its normalizer. (10)2. Let G be a group, prove that: (a) (12)The derived subgroup G' is normal subgroup of G. (ii) G/G' is abelian. (iii) If K is a normal subgroup of G such that G/K is abelian then $\mathbf{k} \supseteq \mathbf{G}'$. (b) Prove that a finite dimensional integral domain is a field. 3. (a) Prove that in a commutative ring with identity an ideal M of R is maximal ideal if and only if R/M is a field. (07)Find rank and nullity of $T: \mathbb{R}^3 \to \mathbb{R}^3$ defined by (b) $T(x_1, x_2, x_3) = (x_1 - x_2, x_1 + x_3, x_2 + x_3)$ (07)Let V be a vector space of polynomials of degree ≤ 3, determin whether (c) the vectors $x^3 - 3x^2 + 5x + 1$, $x^3 - x^2 + 8x + 2$ and $2x^3 - 4x^2 + 9x + 5$ of V are linearly independent. (06)Find value of λ for which the following homogeneous system of linear equations has non-trivial solution. Find the solution $(1-\lambda)x_1 + x_2 + x_3 = 0$ $x_1 - \lambda x_2 + x_3 = 0$ $x_1 - x_2 + (1 - \lambda)x_1 = 0$ Find eigenvalues and eigenvectors of the matrix $\begin{bmatrix} 2 & 3 \\ 4 & 3 \end{bmatrix}$. (b) (06)(c) Solve the following system of equations by reducing to reduced echlon form: $2x_1 - x_2 + 3x_3 = 3$ $3x_1 + x_2 - 5x_3 = 0$ $4x_1 - x_2 + x_3 = 3$ SECTION-II Find equation of a sphere passing through the points (0,-2,-4), (2,-1,-1) (a) and having the centre on the straight line 2x-3y=0=5y+2z Discuss the following surface and sketch it $9x^2 - 4y = 9z^2$ (b) (i) (ii) Find cylindrical and spherical polar coordinates of the point P with rectangular coordinates $(2\sqrt{3},2,-2)$.

PURE MATHEMATICS, PAPER-1

-	/ \	C1 41 41 11	
3.	(a)	Show that the lines	٠.

www.maxpapers

x=3+2t, y=2+t, z=-2-3tL:

x=-3+4s, y=5-4s, z=6-5s

Intersect. Find an equation of the plane containing these lines.

Show that the perpendicular distance D of a point $P(x_1, y_1, z_1)$ from the (b) plane ax+by+cz+d=0 is given by $D = \frac{|ax_1 + by_1 + cz_1 + d|}{\sqrt{a^2 + b^2 + c^2}}$ and hence find distance between the parallel planes 2x+2y-4z+3=0 and 3x+3y-6z+1=0.

7. Find length of one arch of the cycloid $x = a(\theta - \sin\theta)$, $y = a(1 - \cos\theta)$.(10) (a)

Show that for the parabola $y = ax^2 + bx + c$, the curvature is minimum at (b) its vertex.

COMPULSORY QUESTION

8. Write only the correct answer in the answer book. Do not reproduce the questions.

- The set $\{i, -i, 1, -1\}$ is: (1)
 - Semi group under addition (b) (a)
- Group under addition
- Group under multiplication (c)
- None of these.

(2) Number of subgroups of order one of an infinite group G is:

- Zero (b) 1 (c) 2
- infinite (e) None of these.

A cycli group of order n is generated by: (3)

- n elements (a)
- (n-1)elements (b)
- two elements (c)
- (d) one element
- None of these. (e)

Let H be a subgroup of order m of a group of order n, the number of right (4) cosets of H in G is:

- (a)
- (b)
- m n

n

None of these. (e)

The dimension of a vector space V is the number of: (5)

- Linearly independent vectors in V.
- Linearly dependent vectors in V. (b)
- Linearly independent vectors spanning V. (c)
- None of these. (d)

The characteristic of an integral domain is: (6)

a prime (c) zero or a prime (d) None of these.

The eigenvalue is related to the corresponding eigenvector (for a matrix (7) A) as:

- (a) $|\mathbf{A} - \lambda \mathbf{I} \underline{\mathbf{x}}| = 0$
- $|A \lambda I| \underline{x} = b$ (b)
- (c) $Ax = \lambda x$
- None of these.

For two vectors A and B, A.B gives: (8)

- Cos of angle between A and B (a)
- (b) Area of parallelogram with \vec{A} and \vec{B} as its adjacent sides.
- Vector perpendicular to A and B (c)
- ·(d) Vector parallel to the plane of A and B
- None of these. (e)

(9) If θ is angle between two vectors \vec{A} and \vec{B} , then

> (a) tan θ

(b)

sin θ (c)

- (d) sec 0
- None of these.

COMPETITIVE EXAMINATION FOR RECRUITMENT TO POSTS IN BPS-17 UNDER THE FEDERAL GOVERNMENT, 2001.

PURE MATHEMATICS PAPER-II

TIME ALLOWED: THREE HOURS

MAXIMUM MARKS: 100

NOTE: Attempt FIVE questions in all, including question No.8 which is COMPULSORY. At least select TWO questions from each section. All questions carry EQUAL marks.

SECTION-I

1. (a) (i) Find
$$\lim_{x\to a} \frac{x^p - a^p}{x - a}$$
. (5 + 5)

(ii) Find a and b such that
$$f(x) =\begin{cases} x^3, x < -1 \\ ax + b, -1 \le x < 1 \text{ is continuous for } \\ x^2 + 2, x > 1 \end{cases}$$

all x.

(b) (i) Find
$$\frac{dy}{dx}$$
 when Sin (ln xy) = x + y² (5 + 5)

(ii) Use Taylor's theorem to prove that $\ln \sin (x+h) = \ln \sin x + h$ $\cot x - \frac{1}{2} h^2 \csc^2 x + \frac{1}{3} h^3 \cot x \csc^2 x + \cdots$

2. (a) Evaluate
$$\int \frac{dx}{(1-2x^2)\sqrt{1-x^2}}$$
 (08)

(b) Evaluate
$$\int e^{3x} \sin 4x dx$$
 (06)

(c) Test the convergence or divergence of the series:

$$\frac{2}{5} + \frac{2.4}{5.8} + \frac{2.4.6}{5.8.11} + \frac{2.4.6.8}{5.8.11.14} + \dots$$
 (06)

3. (a) Find the asymptotes of the curve
$$x^2y^2(x^2-y^2)^2 = (x^2+y^2)^2$$
. (10)

(b) Find maxima and minima of the radius vector of the curve:

$$\frac{c^2}{r^2} = \frac{a^2}{\sin^2 \theta} + \frac{b^2}{\cos^2 \theta}.$$
 (10)

4. (a) Trace the folium of Descartes
$$x^3 + y^3 = 3axy$$
. (08)

(b) Define an open sphere in a metric space(x,d). Let (x,d_0) be the discrete metric space, write open balls centered at $x \in X$ with radius $\frac{1}{2}$ and $\frac{3}{2}$.

(c) Let X = C [a,b] be the set of all real valued continuous defined on [a,b]. Define a function d:X x → R as follows: (06)
 For f, g∈ X, d(f,g) = ∫ f(x) - g(x) | dx. Prove that (x,d) is a metric space.

SECTION-II

- 5. (a) Separate into real and imaginary parts tan (x+iy). (07)
 - (b) Show that $\log(1+\cos\theta + i\sin\theta) = \ln(2\cos\frac{\theta}{2}) + i\frac{\theta}{2}$ (06)
 - (c) Sum the series: (07) $1 + c \cos \theta + \frac{c^2}{2!} \cos 2\theta + \frac{c^3}{3!} \cos 3\theta + \dots$
- 6. (a) Define an analytic function. Prove that the necessary and sufficient condition for a function W=f(z)=U(x,y)+iV(x,y) to be analytic is that Ux, Vx, Uy, Vy exist and are continuous such that Ux = Vy, Uy = -Vx. (10)
 - (b) Using cauchy's integral formula evaluate $\int_{c}^{c} \frac{dz}{1+z^2}$ where C is part of the parabola y=4-x² from A(2,0) to B(-2,0). (10)
- 7. (a) Expand $f(z) = \frac{1}{z^2}$ about z = 2 using Taylor's series expansion. (10)
 - (b) Consider the transformation $W = e^{\frac{\pi}{4}} Z$ and determine the region in w-plane corresponding to the triangular region bounded by the lines x = 0, y = 0 and x + y = 1 in the z-plane. (10)

COMPULSORY QUESTION

- 8. Write only the correct answer in the answer book. Do not reproduce the questions.
 - (1) The function $f(x) = \frac{x^2 a^2}{x a}$ is discontinuous at:
 - $\begin{array}{ccc} x-a \\ (a) & x=1 \end{array} \qquad (b) \qquad \Rightarrow \qquad (a)$
 - (c) x = 0 (d) $x = \sqrt{a}$ (e) None of these.
 - (2) $f(x) = \cos x$ has a maximum value at:
 - (a) x = 0 (b) x = 0
 - (c) $x = \frac{\pi}{2}$ (d) $x = \frac{3\pi}{2}$ (e) None of these.
 - (3) $\lim \frac{\sin x}{x}$ is:
 - (a) zero (b) 1 (c) undefined (d) -1 (e) None of these.
 - (4) Derivative of the function $f(x) = \tan x$ at $x = \frac{\pi}{4}$ is:
 - (a) 2 (b) $\frac{1}{2}$
 - (c) 1 (d) Zero (e) None of these.
 - (5) For an increasing function f, let $x_1 < x_2$, then:
 - (a) $f(x_1) > f(x_2)$
- (b) $f(x_1) < f(x_2)$
- (c) $f(x_1) = f(x_2)$
- (d) None of these..

(6)Area under the curve $f(x) = e^x + 2$ bounded by x=0, x=2 and x-axis is given by:

(a) 3 $e^{3}+2$

- $e^{2} + 1$ (c)
- $e^{2}+3$ (e)
- None of these...

(7) Normal to the parabola $y^2 = 12x$ at (3,-6) is:

- (a) y = x + 3
- (b) y = x - 9
- (c) y + x + 3 = 0
- (d) None of these.

Equation of tangent to the circle $x^2 + y^2 = a^2$ at (x_1, y_1) is given (8)

- (a) $x_1^2 + y_1^2 + 2gx + 2fy + c = 0$
- $x^{2} + y^{2} + 2gx_{1} + 2fy_{1} + c = 0$ **(b)**
- (c) $xx_1 + yy_1 + 2gx_1 + 2fy_1 + c = 0$
- (d) $xx_1 + yy_1 + g(x + x_1) + f(y + y_1) + c = 0$
- (c) None of these.

(9)In a complete metric space:

- Every sequence is bounded (a)
- (b) Every sequence converges
- (c) Every cauchy sequence converges
- (d) There is no convergent sequence.
- (e) None of these.

The open ball of radius 1 and center at zero in R is given by: (10)

- (b) $\{0,1\}$
- (-1,1)(c) (d)

None of these.

For the two positive term series $\sum a_n$ and $\sum b_n$ if

 $a_n \le b_n \forall_n = 1,2...$ if $\sum b_n$ is convergent, then:

- $\sum a_n$ diverges
- $\sum_{n=0}^{\infty} a_n$ converges
- $\sum a_n$ converges absolutely (d) None of these.

Polar form of the complex number z = 3 - 4i is: (12)

- 5e i0 (a)
- (b) 5e -i0
- 5e 2i8 (c)
- (d)

(e) None of these.

. (13) Log (x + iy) is given by ($|z| = \sqrt{x^2 + y^2}$, $\theta = \tan^{-1} \frac{y}{2}$):

- (a) $\log |z| + i0$
- $\log |z| + i \lambda \theta$
- (c) $\log (|z| + i\lambda \theta)$
- (d) $\log(|z|+i\theta)$
- (c) None of these..
- A curve Z = f(t) is smooth if for $t \in [a,b]$: (a) f'(t) = I
 - (b) f'(t) = 0
- (c) $f'(t) \neq 0$
- (d) f(a) = f(b)
- (c) None of these...

- (15) On a Simply connected domain D and any closed cond C in D, for an analytic function f(z), $\int f(z)dz$ is:
 - (a) Zero
- (b) non zero
- (c)
- (d) $\frac{1}{2}$
- (e) None of these.

- (16) $\lim_{n\to\infty} (1+\frac{1}{n})^n$ is:
 - (a)
- (b) zero
- (c) e
- (d) eⁿ
- None of these.
- (17) The set of integers together with the operation of multiplication forms:
 - (a) a semi-group
- (b) group

(e)

- (c) Integral domain (d)
- field (e)
 - (e) None of these.

- (18) $\int \tan x dx$ is:
 - (a) sec x tan x
- (b) sec 2 x

(e)

- (c) In sec x
- (d) sec x (e)
 - None of these.
- (19) $\int_{-1-\sqrt{1-y^2}}^{1} \int_{-\sqrt{1-y^2}}^{\sqrt{1-y^2}} (2+x) dx dy \text{ is:}$
 - (a) $\frac{\pi}{2}$

 2π

- (b)
- (d) Zero
- (e) None of these.

(20) $\left| \int \frac{dz}{z^2} \right| is$

(c)

- (a) ≤ 2 (c) 2
- (b) · ≤1
- (b) · ≤
- None of these.

COMPETITIVE EXAMINATION FOR RECRUITMENT TO POSTS IN PBS-17, UNDER THE FEDERAL GOVERNMENT, 2002

PURE MATHEMATICS, PAPER-I

TIME ALLOWED: THREE HOURS

MAXIMUM MARKS: 100 ·

NOTE:

Attempt FIVE questions in all, including QUESTION NO. 8 which is COMPULSORY. Select at least TWO questions from each of the

SECTIONS I and II. All questions carry EQUAL marks.

Q.No.	Que	SECTIONS 1 and II. All questions carry EQUAL marks.	Marks
		SECTION - I	
		<u>SECTION-1</u>	
į	(a)	Let G be a finite group and H be its Subgroup. Then prove that the order of H divides the order of G.	10
	(b	State and prove Fundamental theorem of Homomorphism in groups.	10
2	(a)	Define (i) Commutator Sub group G' of a group G. (ii) Subrings. (iii) Integral Domain.	9
	(b	Show that the correspondence $a + \mathbf{i}b \rightarrow \begin{bmatrix} a & b \\ -b & a \end{bmatrix}$, $a, b \in \mathbb{R}^*$ is an isomorphism of the field C of complex numbers into the ring of 2×2	11
		matrices over R*.	
3	(a)	Let V be a vector space over F and W a non-empty subset of V. Prove that W is a subspace of V iff it is closed under the operation of addition and scalar multiplication.	08
	(b	Show that the yz plane in \mathbb{R}^3 is spanned by $(0,1,2)$, $(0,2,3)$ and $(0,3,1)$.	06
-	(c)	Let $V=R[x]$ be the vector space of all polynomials in x over R. Show that the mapping: $I:V\to R$ defined by $(v)I=\int\limits_0^1 v dx$, is linear.	06 .
4	(a)	If A is an idempotent matrix then prove that (i) $B = I - A$ is an Idempotent matrix, (ii) $AB = BA = 0$.	06
	(b	Find the eigen values and eigen vectors of $A = \begin{bmatrix} -5 & 2 \\ 2 & -2 \end{bmatrix}$	06 -
٠.	(c)	Investigate for what values of a, b the simultaneous equations $x + y + z = 6$, $x + 2y + 3z = 10$, $x + 2y + az = b$, have: (i) No solution (ii) A unique solution (iii) an infinite number of solutions.	08
		SECTION – II	
5	(a)	Find the length of one must the cycloid $x = b(\theta - \sin \theta)$, $y = b(1 - \cos \theta)$.	07

PURE MATHEMATICS, PAPER-I

(c)	Show that the equation of tangent to the ellipse $\frac{x^2}{a^2} + \frac{y^2}{b^2} = 1$ at the	06
	point (x_1, y_1) is $\frac{xx_1}{a^2} + \frac{yy_1}{b^2} = 1$.	
(a)	Find the equation of the plane through the points (x_1, y_1, z_1) , (x_2, y_2, z_2) and (x_3, y_3, z_3) .	06
(b	Find the Cartesian and spherical polar coordinates of the point P with cylindrical coordinates (4, arc Cos $\frac{4}{5}$, 3).	06
(c)	Find the equation of the sphere having the straight line joining the points (2,3,4) and (-2,-3,-4) as a diameter.	08
 (a)	Define the curvature, the unit principal normal vector and the unit binormal vector of a curve C.	06
(b	Find the torsion of the curve C: $r(t) = [a \cos t, a \sin t, ct]$.	0.7
(c)	Prove the Serre-Frenet's formula $b' = -\tau \varphi$.	07

COMPULSORY QUESTION

8. Write only the correct choice in the Answer Book. Don't reproduce the statement.

1	0,0,	1 are the direction Cosines of:					
	(a)	x-axis	(b)	y-axis			
	(c)	z-axis	(d)	None of these.			
2	AB	=AC ⇒ B=C when					
	(a)	A is Non Singular	(b)	A = 0			
	(c)	A ⁻¹ exists	(d)	None of these.			
3	The	angle between the planes x -y - 2z +	3 = 0	and $2x + y - z = 5$ is			
	(a)	0	(b)	$\frac{\pi}{2}$ radians			
	(c)	$\frac{\pi}{3}$ radians	(d)	None of these.			
4	If $\Delta B = BA$, when A and B are square matrices, the multiplication is said to be:						
, 	(a)	Associative	(b)	Reflexive			
	(c)	Commutative	(d)	None of these.			
5	The	The perpendicular distance of the point (3,-1,2) from the plane $2x + y - z = 4$ is:					
	(a)	2	(b)	4			
	(c)	$\frac{1}{\sqrt{6}}$	(d)	None of these.			

PURE MATHEMATICS, PAPER-I

6	$\frac{x^2}{a^2} + \frac{y^2}{b^2} - \frac{z^2}{c^2} = -1 \text{ represents};$							
	(a) Sphere	(b)	Ellipsoid					
	(c) Hyperboloid of one sheet	(d)	Hyperboloid of two sheets.					
•	(e) None of these.							
7	The radius of the sphere $x^2 + y^2 + z^2$	4x + 2	2y - 6z = 1 is:					
	(a) 1	(b)	5					
	(c) 10	(d)	None of these.

NQTE:

Attempt FIVE questions in all, including QUESTION NO. 8 which is COMPULSORY. Select at least TWO questions from each of the SECTIONS I and II. All questions carry EQUAL marks.

Qaro.	o. Question					
		SECTION - I				
	(11)	Prove that an open sphere in a metric space X is an open set.	07			
	(b)	The intersection of any two open sets and hence of any number of	07			
		open sets in X is open. (Prove for topological space (X, τ)).				
	(c)	Define:	06			
		(i) Interior point of A (ii) Exterior point of A.				
		(iii) Boundary point of A. (iv) Closure of A; where A is a subset of a subset of a topological space X.				
2	(a)	Let $X = \{x, y, z\}$, $\tau = \{\Phi, X, \{x\}, \{y, z\}\}$. Define $g: X \to X$ by	06			
£-	(4)	g(x) = y, g(y) = z, g(z) = x. Verify whether g is continuous or not.	00			
	(b)		08			
	(0)	Prove that $\beta(m,n) = \frac{\Gamma(m)\Gamma(n)}{\Gamma(m+n)}$	00			
	-	I (m + n)				
	(c)	Show that $\beta(m,n) = \beta(n,m)$; also evaluate $\Gamma(\frac{5}{2})$.	06			
		2	'			
3	(a)	Ian 3v	06			
.,	(11)	Evaluate $\lim_{x \to \frac{\pi}{2}} \frac{\tan 3x}{\tan x}$.				
		2 (41) X	<u> </u>			
	(b)	Find the volume of the tetrahedron bounded by the coordinate	08			
	planes and the plane $\frac{x}{x} + \frac{y}{1} + \frac{z}{z} = 1$, where a, b, c are positive					
		a b c	{			
	,	constants.	0.6			
	(c)	Calculate $\int_{1}^{4} \frac{dx}{(x-2)^{3}}$	06			
		$\frac{1}{(x-2)^{\frac{2}{3}}}$	}			
		(x - 2)				
4	(a)	<u>σ</u>	06			
	, ,	Test the convergence of the series $\sum_{n=1}^{\infty} \frac{n}{(n+1)(n+2)}$.				
	(b)	Prove that the least perimeter of an isosceles triangle in which a	06			
•	(0)	circle of radius r can be inscribed is $6r\sqrt{3}$.				
	(1)	State and prove Fundamental theorem of Integral calculus.	08			
	(c)	State and prove randamental theorem of integral calcinus.	0.0			
		<u>SECTION – II</u>	1			
5	(a)	Expand Cos ⁵ 0 Sin ³ 0 in series of Sines of multiples of 0.	08			
	(b)	Find the 6 Sixth roots of -1.	06			
	(c)	Prove that $\operatorname{Cos} h^{-1}z = \operatorname{Log}(z + \sqrt{z^2 - 1})$.	06			
	, ,	Prove that $\cos H = \text{Log}(Z + \sqrt{Z} - 1)$.				
6	(a)	Expand $f(x) = \sin x$ in a Fourier cosine series in the interval	07			
~	()	$0 \le x \le \pi.$	1			

PURE MATHEMATICS, PAPER-II

(b) Verify that $u = x^2 - y^2 - y$ is harmonic in C and find a conjugate harmonic function v of u.				
(c)	Evaluate $\oint_{c} \frac{dz}{z-c}$, c is the circle $ z = 2$ (counter clockwise).	06		
(a)	Find the center and radius of convergence of the power series $\sum_{n=0}^{\infty} \frac{(z-2i_n)^n}{5^n}$	06		
(b)	Define the following terms: (i) Pole (ii) Isolated essential singularity (iii) Zero of an analytic function	06		
(c)	Evaluate $\oint_{c} \frac{z}{z^2 - \frac{1}{4}} dz$, where c is the unit circle (counter clock wise).	08		

COMPULSORY QUESTION

8. Write only the correct choice in the Answer Book. Don't reproduce the statement.

I	The function $f(x) = \frac{x^2 - 9}{x - 3}$ is discontinuous at:					
	(a) x = 0	(b) x = 3				
	(c) x = 1	(d) None of these.				
2	f(x) = Sin x has a minimum valu	at:				
	(a) $x = 0$	(b) $x = \frac{\pi}{2}$				
	$\left(c\right) = \frac{3\pi}{2}$	(d) None of these.				
3	$\lim_{x\to\infty} \left(1+\frac{1}{x}\right)^x \text{ is:}$					
	(a) 0	(b) I				
	(c) c	(d) -e				
4	Derivative of the function f(x) =	$\mathbf{n} \times \mathbf{at} \times = 0$ is:				
	(a) I	(b) 0				
	(c) ∞	(d) None of these.				
5	For a decreasing function g, let x	$x_1 < x_2$; then:				
	(a) $g(x_1) > g(x_2)$	(b) $g(x_1) < g(x_2)$				
	$(c) g(x_1) = g(x_2)$	(d) None of these.

14	Which of the following statements is not correct?				
	(a)	An absolutely convergent series is convergent.	(b)	$\sum_{1}^{\infty} \frac{1}{n}$ is convergent	
	(c)	$\sum_{i}^{n} n \text{ is divergent}$	(d)	$\left\{1+(-1) n^{+1}\right\} \text{ oscillates}$	
.				infinitely.	
15	The	period of cos x sin x is:			
	(a)	π 2	(b)	2π	
,	(c)	$ \pi $	(d)	Arbitrary.	
16	Let	the metric space be R and let $x_0 = 1$ ar	nd r=	$\frac{1}{2}$. Then $S_{\frac{1}{2}}(I)$ is given by:	
	(a)	$\left[\frac{1}{2},1\right]$	(b)	$10,\frac{3}{2}$ [
-	(c)	$\left[1, \frac{1}{2}, \frac{3}{2}\right]$	(d)	None of these.	
17	Wh	ich of the following statements is not co	orrect	?	
	(a)	If gof is injective, then f is injective.	(b)	If gof is surjective, then g is surjective.	
	(c)	If gof is surjective, and g is injective, then f is surjective.	(d)	If gof is injective, and f is surjective, then g is surjective.	
	Not	e: $f: A \rightarrow B$ and g: $B \rightarrow C$ are functions	i.		
18	Sele	ect the correct statement;			
	(a)	$\operatorname{Int}\left(\operatorname{Int}\Lambda\right)\neq\operatorname{Int}\left(\Lambda\right)$	(b)	Int $(A \cup B)$ =Int $(A) \cup$ Int (B)	
	(c)	$Iut (A \cap B) = Int(A) \cap Int(B)$	(d)	$\operatorname{Ext}(A \cup B) \neq \operatorname{Ext}(A) \cap \operatorname{Ext}(B)$	
		where A and B are any two subsets of	a top	ological space.	
19	f co	t z dz is equal to:	···-		
	(a)	2 πί,	(b)	πί	
	(c)	Zero	(d)	None of these.	
	who	ere c is the unit circle (Counter clockwi	se).		
20	The	image of the region $1.5 \le z < 2.1$ und		mapping $w = z^2$ is:	
	(a)	$ 2.25 \le w < 4.41$	(b)	1.5 ≤ w = 4.41	
	(c)	$ 2.25 \le w < 2.1$	(d)	None of these.	

FEDERAL PUBLIC SERVICE COMMISSION www.maxpapers.com

COMPETITIVE EXAMINATION FOR RECRUITMENT TO POSTS IN PBS-17, UNDER THE FEDERAL GOVERNMENT, 2003

PURE MATHEMATICS, PAPER-I

TIME ALLOWED: THREE HOURS

NOTE: Attempt FIVE questions in all, including question NUMBER- 8 which is COMPULSORY. Select at least TWO questions from each of the SECTIONS I and II. All question carry EQUAL MARKS.

SECTION-I

- (a) Let H, K be subgroup of a group G and HK={hK|h∈H, k∈K}.
 Show that HK is a subgroup of G if and only if HK=KH.
 - (b) Let H be a normal subgroup and K a subgroup of group G. Show that the factor groups $HK \mid_H$ and $K \mid_H \cap K$ exist and are isomorphic to each other.

 Also give the famous name of this result. (12)
- 2. (a) Give definition of normalizer of a set in group G. Prove that the index of normalizer of an element g in G is equal to the number of elements in conjugacy class C_g of g in G. (10)
 - (b) State the famous Pigeonhole principle. Use this principle to justify the claim "every integral domain is a field". (10)
- 3. (a) What is meant by a basis of vector space V over field F. If $x_1, ..., x_m$ are m linearly independent vectors in n dimensional vector space V over field F then show that $n \ge m$. (08)
 - (b) Give definition of finite extension of a field. If L is a finite extension of field K and K is a finite extension of field F, Then show that L is a finite extension of F. (12)
- 4. (a) Let S and T be linear transformations of finite dimensional vector space
 V into itself. Define the rank r(s) of s. Then show that r(TS) ≤ min {r(s),
 r(T)} and that r(ST)=r(TS)=r(T) whenever S is invertible. (10)
 - (b) Let V be an n-dimensional vector space over field F. Let T be a linear transformation from V into itself having all its characteristic roots in F.

 Show that T satisfies a polynomial of degree n over F. (10)

SECTION -II

5. (a) How would you differentiate between hyperbola and parabola? Prove that the lines $y = \frac{b}{a}x$ and $y = \frac{-b}{a}x$ are asymptotes of the hyperbola

$$\frac{x^2}{a^2} - \frac{y^2}{b^2} = 1 \tag{10}$$

- (b) Give significance of the pedal equation of a plane curve. Show that $p^2 = ar$ is the Pedal equation of the parabola $y^2 = 2a(x+a)$. (10)
- 6. (a) Express the equation $P = 7 \sin \theta \sin \phi$ in cylindrical and rectangular coordinates (10)
 - (b) What kind of surfaces in IR³ are called ellipsoids? Identify the standard name of the surface $x^2 + 9y^2 4z^2 6x + 18y + 16z + 20 = 0$. (02+08)
- 7. (a) What is the osculating plane of a curve at point P: Show that the osculating planes at any three points of the cubic curve $r = (u, u^2, u^3)$ meet at a point lying in the plane determined by the three points. (10)

 Page 1 of 3

PURE MATHEMATICS, PAPER-I

(b) Find the curvature and torsion of the curve of intersection of the following two quadric surfaces: $a_1x^2+b_1y^2+c_1z^2=1$, $a_2x^2+b_2y^2+c_2z^2=1$. (10)

COMPULSORY QUESTION

que	stion.				
(1)	The n	umber of identity elements	in a group	is:	
	(a)	O,	(b)	1	
	(c)	2	(d)	None	e of these.
(2)	A field	d must contain at least:			
	(a)	one element	(b)	Two	elements
÷	(c)	Three elements	(d)	None	e of these.
(3)	A basi	s of Vector space contains	•		
•	(a)	only the zero vector	(b)	no ze	ero vectors
•	(c)	zero as well as non-zero	vectors	(d)	None of these.
(4)	Every	vector space is:			
, ,	(a)	a group	(b)	a ring	· 7
	(c)	a field	(d)		of these.
			(4)	rvoire	. Of those.
(5)		A is nilpotent iff:			•
	(a)	$A^n \neq 0, \forall n$	(b)		0 for some n
	(c)	$A^n = 0, \forall n$	(d)	None	of these.
(6)	A unit	matrix of order n has the r	ank:	٠	.*
	(a)	0	(b)	1	
٠	(c)	n	(d)	None	of these.
(7)	The m	atrix equation AX = B has	unique sol	lution if:	· •
	(a)	0	(b)	A is s	singular
•	· (c)	A is not invertible	(d)	None	of these.
(8)	The de	terminant of a triangular m	natrix is the	e produc	et of its entries on:
	(a)	first row	(b)		nd row
•	(c)	main diagonal	(d)	None	of these.
(9)	In any	conic, the harmonic mean	between th	ne segme	ents of focal chord is:
` ,		the geometric mean			
	(c)	semi-latus-rectum	(d)		of these.
(10)	a = r	$\cos \theta$ is an asymptot of the	curve:		
(/	(a)		(b)	r = a	sin θ
• •	(c)	$r = a \tan \theta$	(d)		of these.
				•	
(11)	The r	adius of curvature of $y = \sqrt{\frac{1}{2}}$	$\sqrt{r^2-x^2}$ f	orx ∈[-	r, r] is:
	(a)	$\frac{1}{2}$	(b)	r	
	(c)	r 2r	(d)		of these.

- (c) (d) None of these. (13)The rectangular coordinates of the point with spherical coordinates $(5, .5\pi, .5\pi)$ are: (a) (5,0,0)(0,5,0)(b) (0,0,5)(d) None of these. (c) $a^{-2} x^2 + b^{-2} y^2 - c^{-2} z^2 = -1$ is hyperboloid of: (14)(a) 1 sheet 2 sheets 3 sheets None of these. (c) (d)
- (1.5)The principal normal at point P on a curve is the intersection of normal plane at P and:
 - the curve (a)

- tangent plane (b)
- (c) osculating plane
- (d) None of these.
- (16)A curve is not a straight line iff its curvature is:
 - (a) zero

(b) non-zero

(c) one

- None of these. (d)
- The relations t' = kn, $n' = \overline{1}b$, $b' = -\overline{1}n$ are known as (17)
 - Gauss-Bonnet equations
- (b) serret - Frenet formulae
- (c) Tissot equations
- None of these. (d)
- A set of n+1 vectors in n-dimensional vector space: (18)
 - must be linearly independent (b) (a)
- must be linearly dependent
- must be a basis (c)
- None of these.
- (19)Which of the following terms is not used in algebra?
 - homomorphism (a)
- homeomorphism (b)
- epimorphism (c)
- None of these. (d)
- No group of order 28 can have subgroup of order: (20)
 - (a)

(b)

(c) 14 None of these.

COMPETITIVE EXAMINATION FOR RECRUITMENT TO POSTS IN PBS-17, UNDER THE FEDERAL GOVERNMENT, 2003

PURE MATHEMATICS, PAPER-II

TIME ALLOWED: THREE HOURS

NOTE: Attempt FIVE questions in all, including question NUMBER- 8 which is COMPULSORY. Select at least TWO questions from each of the SECTIONS I and II. All questions carry EQUAL MARKS.

SECTION-I

- 1. (a) For every positive integer n, show that $\lim_{x\to 0} \frac{\sin nx}{nx} = 1$. (05)
 - (b) Discuss the continuity of function f given by $f(x) = \begin{cases} x \text{ if } x \text{ is irrational number} \\ 1 x \text{ if } x \text{ is rational number, at } x = \frac{2}{3} \end{cases}$ (05)
 - (c) Show that any real function f(x) which is differentiable at point x_0 must be continuous at x_0 . Further show that the converse generally is not true. (10)
- 2. (a) Find $\frac{dy}{dx}$ of $(\tan x)^y + y^{\cot x} = b$. (06)
 - (b) Find the volume of the solid region bounded above by the sphere $x^2 + y^2 + z^2 = 4$ and below by the upper nappe of the cone $z^2 = x^2 + y^2$. (06)
 - (c) Show that radius of the base of an open cylinder of given surface s and greatest volume V is equal to its height. (08)
- 3. (a) Let A be any set in a metric space X and x ∈ X. Show that x is a closure point of A iff every open sphere about x intersects A. (10)
 - (b) Let f be a function from metric space X into a metric space Y and $x \in X$.

 Prove that f is continuous at x iff $\lim_{n \to \infty} f(x) = f(x)$ wherever (x) is a sequence in X converging to x. (10)
- 4. (a) Examine the series $\sum_{m=1}^{\infty} \frac{\arctan m}{1+m^2}$ for convergence. (09)
 - (b) Let f(x) be Riemann integrable function on [a,b] and let there be a differentiable function F on [a,b] such that F' = f. Show that b f(x)dx=F(b)-F(a). Also give the famous name of this result. (11)

SECTION -II

- 5. (a) Prove that every complex number has n nth roots, for all positive integer n. (08)
 - (b) Deduce the famous Cauchy Riemann conditions as a necessity for analytic functions. Show also that these conditions are not sufficient to guarantee the analyticity. (12)
- 6. (a) Give the standard construction of arc tan z and then discuss its analyticity in detail. (08)

PURE MATHEMATICS, PAPER-II

- (9) Every Riemann integrable function is:
 - (a) differentiable
- b) analytic
- (c) Riemann-steltye's integrable (d)
- None of these.
- (10) Every subset of a finite metric space is closed because:
 - (a) there exists no closed set
 - (b) you can not find any limit point of such sets.
 - (c) such set have no limit points (d) None of these.
- (11) Interior of a set A is:

8)

0)

ЦS

O)

the

- (a) smallest closed superset of A (b) proper open subset of A
- (c) largest open subset of A (d) None of these.
- (12) Every set is a metric space w.r.t the metric known as:
 - (a) indiscrete metric
- (b) discrete metric
- (c) normable metric
- (d) None of these.

- (13) A metric space:
 - (a) is always complete
- (b) can never be complete
- (c) may be complete
- (d) None of these.
- (14) The function $f: X \rightarrow IR$ is continuous if the metric space X is:
 - (a) complete
- (b) discrete
- (c) incomplete
- (d) None of these.
- (15) $e^{i\theta} = \cos \theta + i \sin \theta$ is called:
 - (a) Cauchy formula
- (b) Gauss formula
- (c) Euler formula
- (d) None of these.
- (16) $ln(z + \sqrt{z^2 + 1})$ is equal to:
 - (a) sin⁻¹z

(b) $\cos h^{-1}z$

(c) sin hz

- (d) None of these.
- (17) The converse of the cauchy's integral theorem is also known as:
 - (a) Jordan Theorm
- (b) Goursat Theorem
- (c) Morera's Theorem
- (d) None of these.
- (18) $1-z+\frac{z^2}{2!}-\frac{z^3}{3!}+\frac{z^4}{4!}-...$ converges to:
 - (a) e²

(b) e⁻⁷

(c) $-ze^z$

(d) None of these.

- (19) $\Gamma(z+1)$ equals:
 - (a) $\Gamma(z)$

(b) $z^{-1}\Gamma(z)$

(c) $z\Gamma(z)$

- (d) None of these.
- (20) For Beta function B(m,n) is equal to:
 - (a) $\frac{\Gamma(m+n)}{\Gamma(m)\Gamma(n)}$
- (b) $\frac{\Gamma(n)\Gamma(m-n)}{\Gamma(m)}$
- (c) $\frac{\Gamma(m)\Gamma(n)}{\Gamma(m+n)}$
- (d) None of these.

COMPETITIVE EXAMINATION FOR RECRUITMENT TO POS<u>tsvw.maxpapers.com</u> IN BPS-17, UNDER THE FEDERAL GOVERNMENT, 2004

PURE MATHEMATICS, PAPER-I

TIME / NOTE:	ALLOWED: THREE HOURS Attempt FIVE questions in all, including QUESTION NO. 8 which is COMPULSORY. Select TWO questions from each SECTION. All questions carry EQUAL marks.	
	SECTION – I	
l (a)	If G is a finite group and H is a subgroup of G, prove that the order of H is a divisor	
	of the order of G. (10)	
(b)	Let G be a group, H a normal subgroup of G, T an automorphism of G. Let $T(H) = \{ T(h) : h \in H \}$. Prove that $T(H)$ is a normal subgroup of G. (10)	
2.(a)	Let R be a commutative ring with unit element shoes only ideals are	
(b)	(0) and R itself. Prove that R is a field. Let F be a finite field with q elements and suppose that FCK, where K is)
(0)	also a finite field with $[K:F] = n$. Prove that K has q^0 elements. (10))
3.(a)	If $S=\{x_1,x_2,\ldots,x_n\}$ is a set of non zero vectors spanning a	
	vector space V, prove that S contains a basis of V. (10))
(b)	Let $T: U \to V$ be a linear transformation from an n – dimensional vector	
	space U to a vector space V over the same field F. If $N(T) = \{u \in U : T(u) = 0\}$ and $R(T) = \{v \in V : T(u) = v \text{ for same } u \in U\}$,	•
	Prove that dim N(T) + dim R(T) = n. (10)	
4.(a)	Let Λ be a n x n matrix. Prove that A.adj Λ = det A. I_n (8)	
(b)	Let V be a finite dimensional vector space over F, A(V) the algebra of all linear	
	transformations V to V. For $T \in A(V)$, $r(T)$ denotes rank of T. (12) If $S, T \in A(V)$,	
	Prove: (i) $r(S T) \le r(T)$	
	(ii) $r(T S) \le r(T)$ (iii) $r(S T) = r(T S) = r(T)$, if S maps V onto V.	
•	SECTION-II	
5. (a) (b)	Prove that the intrinsic equation of the cardiode $r = (1 - \cos \theta)$ is $8 \sin^2 (\psi/6)$. (10) Prove that the normal to a given curve is tangent to its evolute (10)	
6. (a)	Find the equations of tangent plane and the normal to the hyperboloid	
,	$x^2 - 3y^2 - z^2 + 3 = 0$ at $(2, 1, -2)$.)
(b)	Find the envelope of the family of planes $3a^2x - 3ay + z = a^3$, and show that its edge of regression is the curve of intersection of the surfaces $xz = y^2$, $xy = z$. (10)	\
7.(a)	Prove that a space curve whose curvature and torsion are in a constant ratio is a helix. (10)	ì
(b)	Find the curvature and torsion of the curve (10	
` ,	$x = 3u - u^3$, $y = 3u^2$, $z = 3u + u^3$.	
	COMPULSORY QUESTION	
(8)	Write only the correct choice in the Answer Book. Do not reproduce the questions.	
	(1) Let G be a cyclic group of order 12. Then G has: (a) 3 distinct subgroup (b) 4 distinct subgroup	,
	(a) 3 distinct subgroup (b) 4 distinct subgroup (c) 6 distinct subgroup (d) None of these	
	(2) Let Q and Z be the additive groups of rationals and integers respectively. Then: (a) The Group Q/Z is cyclic	
	(b) Every element of Q/Z is of infinite order	
•	(c) Every element of Q/Z is of finite order.(d) None of these.	
	 (d) None of these. (3) Suppose A,B are matrices such that the product AB exits and is zero matrix, then 	:
	(a) A must be zero matrix (b) B must be zero matrix	
	(c) Neither A nor B need be zero matrix (d) None of these	

(4) Let A be an n x n matrix, with rank A ≤ n. Then: (a) determinant A may be positive (b) determinant A may be positive (c) determinant A such that A² = A is called: (a) involuntary (b) idempotent (c) nilpotent (d) None of these (d) None of these (e) nilpotent (d) None of these (e) A is linearly independent (d) None of these. (f) The additive group of integers has: (a) A is linearly dependent (d) None of these. (f) The additive group of integers has: (a) G quotient groups of order 6 each (c) I quotient groups of order 6 each (c) I quotient groups of order 6 each (d) None of these. (g) The determinant of a triangular matrix is the product of its entries on: (a) last row (d) None of these (e) involuntary (d) None of these (e) involuntary (d) None of these (f) The equation x² + y² - z² = 0 represents: (a) quadric cone (b) a hyperbolic cylinder (c) a hyperbolic paraboloid (d) None of these (l) Let A be matrix. Then its: (a) rank A > n (b) Row rank may be greater than its column rank. (c) Row rank may be greater than its column rank. (d) None of these (l) A system of m homogeneous linear equations AX = 0 in n variables has a non—trivial solution if and only if: (a) rank A > n (b) ran A < n (c) rank A > n (d) None of these (l) Ag, R denote all 2 x 2 real matrices and real numbers. Let F: M₂ → R, f(Λ) = det Λ, for Λ ∈ M₂. Then: (a) f is onto R (b) J ₀ is a field (c) J ₁ is an integral domain (d) None of these (l) The distance of the point (3, 2, 3) from the plane 2x + 3y - z = 5 is: (a) √(4) √(4) √(4) √(4) √(4) √(4) √(4) √(4	PURE		HEMATICS, PAPER-I:		
 (c) determinant A may be negative (d) None of these (a) involuntary (b) idempotent (d) None of these (e) mipotent (d) None of these (e) mipotent (d) None of these (e) mipotent (e) mipotent (d) None of these (e) A is linearly independent (d) None of these. (7) The additive group of integers has: (a) A is linearly independent (d) None of these. (7) The additive group of order 6 each (e) I quotient group of order 6 each (e) I quotient group of order 6 each (e) I quotient group of order 6 (d) None of these (e) I function (e) first row (d) None of these (f) None of these (f) (e) first row (d) None of these (f) None of these (f) (e) first row (d) None of these (f) None of these (f) (e) involuntary (f) None of these (f) (f) the equation x² + y² - z² = 0 represents: (a) quadric cone (b) a hyperbolic cylinder (c) involuntary (d) None of these (f) None of these (f) (f) the equation x² + y² - z² = 0 represents: (a) quadric cone (b) a hyperbolic cylinder (c) a hyperbolic paraboloid (d) None of these (f) Find denotes the ring of integers mod n, then: (a) f is neither onto nor one-to-one (d) None of these (f) Find denotes the ring of integers mod n, then: (a) f is neither onto nor one-to-one (d) None of these (f) None of these ((4)	Let A be an n x n matrix, with rank	A < n. T	
 (3) A square matrix A such that A² = A is called: (a) involuntary (b) idempotent (c) nilpotent (d) None of these (6) Let V be the real vector space of all functions on R to R, and let A = {x, Cos x}. Then: (a) A is linearly idependent (d) None of these. (7) The additive group of integers has: (a) 6 quotient groups of order 6 each (b) 2 quotient groups of order 3 each (c) 1 quotient group of order 6 (d) None of these. (8) The determinant of a triangular matrix is the product of its entries on: (a) last row (b) main diagonal (c) lirst row (d) None of these. (9) Every elementary matrix is: (a) non singular (b) singular (c) involuntary (d) None of these (10) The equation x² + y² - z² = 0 represents: (a) quadric cone (b) a layperbolic cylinder (c) a hyperbolic paraboloid (d) None of these (d) None of these (e) a now rank my be greater than its column rank. (b) Row rank may be less than its column rank. (c) Row rank my be greater than its column rank. (d) None of these (12) A system of in homogeneous linear equations AX = 0 in n variables has a non-trivial solution if and only if: (a) rank A > n (c) rank A > n (d) None of these. (13) M₂, R denote all 2 x 2 real matrices and real numbers. Let F: M₂ → R, f(A) = det A, for A ∈ M₂. Then: (a) J₁ is a field (b) J₆ is a field (c) J₈ is an integral domain (d) None of these (15) The rectangular coordinates of appoint with spherical coordinates (3, π/4) are: (a) (3, 1, -2) (b) (√(4/4) √(4/4) √(4/4)) (d) None of these (15) The distance of the point (3, 2, 3) from the plane 2x + 3y - z - 5 is: (a) 5/(14) (b) 3/√(14) (d) None of these (16) The distance or the equation of a surface is: (a) f(x, y, z) = 0 (b) f(xy/y)/(x/2) = 0 (c) x = f(x, y) (d) None of these (17) Monge's form of the equation of a surface is: (a) a parabola (b) a circular helix (c) a circle (c) a circle (d) None of these (18) The co					
 (a) involuntary (b) idempotent (c) nilpotent (d) None of these (6) Let V be the real vector space of all functions on R to R, and let A = {x, Cos x}. Then: (a) A is linearly independent (b) A spans V (c) A is linearly dependent (d) None of these. (7) The additive group of integers has: (a) 6 quotient groups of order 6 each (b) 2 quotient groups of order 3 each (c) 1 quotient group of order 6 (B) The determinant of a triangular matrix is the product of its entries on: (a) I ast row (d) None of these (b) Every elementary matrix is: (a) non singular (b) singular (c) involuntary (d) None of these (10) The equation x² + y² - z² = 0 represents: (a) quadric cone (b) a hyperbolic cylinder (c) a hyperbolic paraboloid (d) None of these (11) Let A be matrix. Then its: (a) a row rank my be greater than its column rank. (b) Row rank may be less than its column rank. (c) Row rank my be less than its column rank. (d) None of these (12) A system of m homogeneous linear equations AX = 0 in n variables has a non-trivial solution if and only if: (a) rank A > n (b) ran A ≤ n (c) rank A > n (d) None of these (13) M₂, R denote all 2 x 2 real matrices and real numbers. Let F: M₂ → R, f(Λ) = det A, for A ∈ M₂. Then: (a) fis onto R (b) fis one-to-one (c) fis neither onto nor one-to-one (d) None of these (14) If Jn denotes the ring of integers mod n, then: (a) J₂ is a field (b) J₂ is a field (c) √3 √2 √2 √2 (d) None of these (15) The distance of the point (3, 2, 3) from the plane 2x + 3y - z = 5 is: (a) √3/4 √3/4 √2 (b) √4/4 √2 (c) √3/4 √2 √2 (d) None of these (16) T		(5)			
 (c) nilpotent (d) None of these (d) None of these (e) A is linearly independent (d) None of these. (e) A is linearly independent (d) None of these. (f) The additive group of integers has: (a) 6 quotient groups of order 6 each (b) 2 quotient groups of order 3 each (e) 1 quotient group of order 6 (d) None of these (8) The determinant of a triangular matrix is the product of its entries on: (a) last row (b) main diagonal (c) lirst row (d) None of these (9) Every elementary matrix is: (a) non singular (b) singular (c) involunitary (d) None of these (10) The equation x² + y² - z² = 0 represents: (a) quadric cone (b) a hyperbolic cylinder (c) a hyperbolic paraboloid (d) None of these (11) Let A be matrix. Then its: (a) row rank may be less than its column rank. (b) Row rank may be less than its column rank. (c) Row rank may be less than its column rank. (c) Row rank may be less than its column rank. (d) None of these (12) A system of m homogeneous linear equations AX = 0 in n variables has a non-trivial solution if and only if: (a) rank A = n (b) ran A < n (c) Is not of these (13) M₂, R denote all 2 × 2 real matrices and real numbers. Let F: M₂ → R, f(A) = det A, for A ∈ M₂. Then: (a) Is is not or (b) Is is a field (c) Is a sittle or (d) None of these (14) If J_n denotes the ring of integers mod n, then: (a) J₁ is a field (b) J₆ is a field (c) J₈ is an integral domain (d) None of these (15) The rectangular coordinates of appoint with spherical coo		(5)			
(6) Let V be the real vector space of all functions on R to R, and let A = {x, Cos x}. Then: (a) A is linearly independent (b) A spans V (c) A is linearly dependent (d) None of these. (7) The additive group of integers has: (a) 6 quotient groups of order 6 each (b) 2 quotient groups of order 6 (d) None of these. (B) The determinant of a triangular matrix is the product of its entries on: (a) last row (b) (c) first row (c) I instrow (d) None of these. (e) Every elementary matrix is: (a) non singular (b) singular (c) involuntary (d) None of these (e) involuntary (d) None of these (l) The equation x² + y² - z² = 0 represents: (a) quadric cone (b) a hyperbolic paraboloid (d) None of these (l) Let A be matrix. Then its: (a) row rank my be greater than its column rank. (b) Row rank may be greater than its column rank. (c) Row rank my be greater than its column rank. (d) None of these (l) A system of m homogeneous linear equations AX = 0 in n variables has a nontrivial solution if and only if: (a) rank A = n (b) ran A < n (c) rank A > n (c) rank A > n (d) None of these. (l) None of these. (l) None of these (l) J ₁ is a field (e) J ₈ is not R (f) = det A, for A ∈ M₂. Then: (a) if is fonto R (b) fis one-to-one (c) fis neither onto nor one-to-one (d) None of these (l) If necessary is a field (e) J ₈ is an integral domain (d) None of these (l) The rectangular coordinates of appoint with spherical coordinates (3, π/6, π/4) are: (a) (3, 1, -2) (b) (√3, √2, √2, √2, √2)/√2, √2) (c) (√3, √2, 2) (d) None of these (l) The distance of the point (3, 2, 3) from the plane 2x + 3y - z = 5 is: (a) (5/4, y, z) = 0 (b) f(x, y, z) = 0 (c) x = f(x, y) (d) None of these (l) Mone of these (l) Honor of the equation of a surface is: (a) f(x, y, z) = 0 (b) f(x, y, z) = 0 (c) x = f(x, y) (d) None of these (l) Honor of these (l) Honor of the equation of a surface is: (a) f(x, y, z) = 0 (b) f(x, y, z) = 0 (c) x = f(x, y) (d) None of these (l) Honor of these (l) H			· · · · · · · · · · · · · · · · · · ·		
Then: (a) A is linearly independent (b) A spans V (c) A is linearly dependent (d) None of these. (7) The additive group of integers has: (a) 6 quotient groups of order 6 each (c) I quotient groups of order 6 each (e) I quotient group of order 6 (d) None of these (e) I quotient group of order 6 (d) None of these (e) I quotient group of order 6 (d) None of these (e) I quotient group of order 6 (d) None of these (e) I quotient group of order 6 (d) None of these (e) Involuntary matrix is: (a) last row (d) None of these. (b) Every elementary matrix is: (a) ton singular (b) singular (c) involuntary (d) None of these (10) The equation $x^2 + y^2 - z^2 = 0$ represents: (a) quadric cone (b) a hyperbolic eylinder (c) a hyperbolic paraboloid (d) None of these (11) Let A be matrix. Then its: (a) row rank my be greater than its column rank. (b) Row rank may be less than its column rank. (c) Row rank may be less than its column rank. (d) None of these (12) A system of m homogeneous linear equations $\Delta X = 0$ in n variables has a non—trivial solution if and only if: (a) rank $\Delta = n$ (d) None of these. (13) M ₂ , R denote all 2×2 real matrices and real numbers. Let $F: M_2 \to R$, $F(\Delta) = \det A$, for $A \in M_2$. Then: (a) $F(\Delta) = \det A$, for $A \in M_2$. Then: (a) $F(\Delta) = \det A$, for $A \in M_2$. Then: (a) $F(\Delta) = \det A$, for $A \in M_2$. Then: (a) $F(\Delta) = \det A$, for $A \in M_2$. Then: (a) $F(\Delta) = \det A$, for $A \in M_2$. Then: (a) $F(\Delta) = \det A$, for $A \in M_2$. Then: (a) $F(\Delta) = \det A$, for $A \in M_2$. Then: (a) $F(\Delta) = \det A$, for $A \in M_2$. Then: (a) $F(\Delta) = \det A$, for $A \in M_2$. Then: (b) $F(\Delta) = \det A$, for $A \in M_2$. Then: (a) $F(\Delta) = \det A$, for $A \in M_2$. Then: (a) $F(\Delta) = \det A$, for $A \in M_2$. Then: (b) $F(\Delta) = \det A$, for $A \in M_2$. Then: (c) $F(\Delta) = \det A$, for $A \in M_2$. Then: (a) $F(\Delta) = \det A$, for $A \in M_2$. Then: (b) $F(\Delta) = \det A$, for $A \in M_2$. Then: (c) $F(\Delta) = \det A$, for $A \in M_2$. Then: (d) $F(\Delta) = \det A$, for $A \in M_2$. Then: (e) $F(\Delta) = \det A$, for $A \in M_2$. Then: (f) $F(\Delta) = \det A$, for $A \in M_2$. Then: (g) $F(\Delta) = \det A$, for $A \in M_2$. Then:		(6)			
(a) A is linearly independent (b) A spans V (c) A is linearly dependent (d) None of these. (7) The additive group of integers has: (a) 6 quotient groups of order 6 each (c) I quotient groups of order 6 each (d) None of these. (8) The determinant of a triangular matrix is the product of its entries on: (a) last row (d) None of these. (b) Every elementary matrix is: (a) non singular (b) singular (c) involuntary (d) None of these. (a) quadric cone (b) a hyperbolic cylinder (c) a hyperbolic paraboloid (d) None of these (10) The equation $x^2 + y^2 - z^2 = 0$ represents: (a) quadric cone (b) a hyperbolic cylinder (c) a hyperbolic paraboloid (d) None of these (11) Let A be matrix. Then its: (a) row rank my be greater than its column rank. (b) Row rank may be less than its column rank. (c) Row rank = column rank (d) None of these (12) A system of m homogeneous linear equations AX = 0 in n variables has a nontrivial solution if and only if: (a) rank $A = n$ (b) ran $A < n$ (c) rank $A > n$ (b) ran $A < n$ (c) rank $A > n$ (b) fis one-to-one (c) ris neither onto nor one-to-one (d) None of these (13) M ₂ , R denote all 2 x 2 real matrices and real numbers. Let F: $M_2 \rightarrow R$, $f(A) = \det A$, for $A \in M_2$. Then: (a) fis ion to R (b) fis one-to-one (c) Fis neither onto nor one-to-one (d) None of these (14) If J_n denotes the ring of integers mod n, then: (a) J_2 is a field (b) J_3 is a field (c) J_3 is an integral domain (d) None of these (15) The rectangular coordinates of appoint with spherical coordinates (3, $\frac{\pi}{6}, \frac{\pi}{4}$) are: (a) $\frac{5}{14}$ (b) $\frac{3}{\sqrt{14}}$ (c) $\frac{4}{\sqrt{14}}$ (d) None of these (16) The distance of the point (3, 2, 3) from the plane $2x + 3y - z = 5$ is: (a) $\frac{5}{14}$ (b) $\frac{3}{\sqrt{14}}$ (c) $\frac{4}{\sqrt{14}}$ (d) None of these (17) Monge's form of the equation of a surface is: (a) $\frac{5}{14}$ (b) $\frac{3}{\sqrt{14}}$ (c) $\frac{4}{\sqrt{14}}$ (d) None of these (18) The only space curve whose curvature and torsion are both constant is: (a) a parabola (b) a circular helix (c) a lon one plane (d) N	•	(0)		Tunction	is on K to K , and let $A = \{x, \cos x\}$.

FEDERAL PUBLIC SERVICE COMMISSIONww.maxpapers.com

COMPETITIVE EXAMINATION FOR RECRUITMENT TO POSTS IN BPS-17 UNDER THE FEDERAL GOVERNMENT, 2004.

PURE MATHEMATICS, PAPER-II

TIME ALLOWED: THREE HOURS MAXIMUM MARKS: 100

NOTE: Attempt FIVE questions in all, including QUESTION NO. 8 which is COMPULSORY. Select

TWO questions from each of the SECTIONS I AND 11. All questions carry EQUAL marks.

SECTION - I

1. (a) Evaluate:
$$\lim_{x \to 0} \frac{e^x - e^{\sin x}}{x - \sin x}$$
 (8)

(c) Find the inclined asymptotes of the curve
$$x^3 - y^3 = 6xy = 0$$
. (4)

2. (a) Evaluate
$$\iint_D xy^2 dxdy$$
, where D is the region 1 bunded by the x-axis, the ordinate at $x = 4$ and are of the parabola $x^2 = 1$. (6)

(c) Find all the maxima and minima of
$$f(x,y) = x^3 + y^3 - 63(x + y) + 12xy$$
 (8)

3. (a) Show that the function f in [0,1], where
$$f(x) = 1$$
, x is irrational

$$= 0, x \text{ is rational, is not Riemann -it tegral}$$
 (6)

(b) Prove that:

$$\int_0^{\pi/2} \ln \cos x \, dx = -\frac{\pi}{2} \ln 2 \tag{6}$$

(c) Prove that
$$\int_{\pi}^{0} \frac{\sin x}{x} dx$$
 converges. (8)

(c) Prove that
$$\lim_{n \to \infty} \left(\mathbf{i} + \frac{1}{n} \right)^n$$
 is a number e, such that $2 \le e \le 3$. (6)

SECTION II

5. (a) Let $x_n + iy_n = (1 + i)^n$, n is a positive integer Using DeMoivre's theorem, Prove:

(i)
$$x_{2n}^2 + y_{2n}^2 = 4^n$$
 (5)

(ii)
$$X_{n-1} y_n + X_n y_{n-1} = 2^{n-1}$$
 (5)

(b) Let f(z) = u(x, y) + iv(x, y) be analytic in a domain D. Using Cauchy – Riemann Conditions, Prove:

$$\left[\frac{\partial}{\partial x} |f(z)|\right]^2 + \left[\frac{\partial}{\partial x} |f(z)|\right]^2 = |f'(z)|^2 \text{ for all } z \text{ in } D.$$
 (10)

PURE MATHEMATICS, PAPER-II:

www.maxpapers.

(8)

6. (a) Let C be a circle with center Z₀ and radius r and let f be analytic in an open set D containing C and its interior. Prove:

$$|f^{(n)}(z_0)| \le \frac{M n!}{r^n}$$
 (n=0,1,2,.....)

where M is the least upper bound of |f(z)| on C.

Show that $\int_{c}^{\infty} \frac{e^{3z} + 3 \operatorname{Coshz}}{\left(z - i \frac{\pi}{2}\right)^{4}} dz = 8 \pi$ **(b)** (6)

where C is a simple closed contour containing i $\frac{\pi}{2}$ in its interior, and the integral is in the positive direction.

- Find the Laurent series expansion, in powers of z, for $\frac{1}{(z-1)(z-3)}$ in the (c) annulus 1 < |z| < 3. (6)
- Find the residues of $\frac{\cosh z}{z^2(z+i\pi)^3}$ at its poles. (10)7. (a)
 - Use the method of residues to evaluate $\int_{c}^{c} \frac{e^{z} d^{z}}{\sin hz}$, where C is the (b) (10)circle |z| = 4 in the positive direction

COMPULSORY QUESTION

(c)

Irrational

Write only the correct choice in the Answer Book. Do not reproduce the question. 8.

(b)

- The set of allnumber forms a sequence: (1)(d) None of these Rational
- f(X) = x, x rational = 0, x irrational in [0,1]: (2)
 - f is discontinuous at $x = \frac{1}{2}$ f is discontinuous at x = 0(b)
 - f is continuous at $x = \frac{1}{3}$ None of these (d) (c)
- The series $\sum_{n=1}^{\infty} \frac{1}{n^p}$ is converges for: (3)

Real

- (b) $p = \frac{1}{2}$ None of these (d) p = 1
- $\Gamma(\frac{1}{2})$ equals to: (4)
 - (d) None of these (b) (a)
- If f is homogeneous of degree n, $x f_x(x,y) + yf_y(x,y) = n f(x,y)$ is called: (5) Euler's formula
 - (b) Lagrange's formula None of these (d) Goursat's formula (c) -
- Every function $X \rightarrow Y$ between metric spaces is continuous if: (6)Y is complete (b) X is discrete
 - None of these (d) X is complete. (c)
- If each f_n is continuous and $f_n \rightarrow f$ Uniformly on E, then: (7)
 - f is continuous on E f is differentiable on E (b) (a)
 - None of these (d) f is discontinuous on E (c)

(8)	Every real -valued continuous function on (a) bounded (b) Unbounded	open interval (0,1) is: (c) monotonic (d) None Market Mes x papers. com
(9)	When n is large, n! = $\sqrt{2\pi n}$ n ⁿ e ⁻ⁿ is	called:
, ,	(a) Hermife's formula (b) (c) Euler's formula (d)	Stirling's formula None of these
(10)	$\Gamma(x) \Gamma(1-x) = \frac{\pi}{\sin n\pi}$, for:	
	(a) $0 < x < 1$ (b) $x = 1$,	2,3,4
	(c) $x = \frac{1}{2}$ only (d) None	
(11)	If $\sum_{n=1}^{\infty} \Lambda_n$ converges absolutely to A, then	n any rearrangement of the series:
	(a) diverges (b) (c) Converges absolutely to A (d)	Converges but not necessary to A None of these
(12)	Every Riemann integrable function is:	
	(a) Continuous (b)	differentiable
	(c) monotonic (d)	None of these
(13)	Every compact metric space is:	nominal sta
	(a) discrete (b) (c) Infinite (d)	Complete None of these
(14)	The set of all points z satisfying (z-1) +	z+1 =4 lies on:
. (• •)	(a) a circle (b)	a parabola
	(c) an ellipse (d)	None of these
· (15)	Let $\sum_{n=1}^{\infty} Z_n$ be a series of Complex number	s:
	(a) if $\lim_{n\to\infty} Z_n = 0$ then series converge	ges to zero
	(b) if the series converges, then lim	$Z_{n} = 0$
	(c) if the series converges, it converges (d) None of these	absolutely
(16)	$(-i)^{i}$ equal to:	
	(a) $e^{\pi/2}$ (b) i (c)	$\pi/2$ (d) None of these
(17)	If C is the circle $ z = 1$, $\int_{C} \frac{\sin z dz}{z^2 + 4}$ eq	uals to:
	(a) 1 (b) 0 (c)	$2 \pi i$ (d) None of these
(18)	Log (-1-i) equal to:	,
	(a) $1/2 \log z - i \frac{3\pi}{4}$ (b) (c) $-1/2 \log z - i \frac{3\pi}{4}$ (d)	$1/2\log z + i \frac{3\pi}{4}$
	(c) $-1/2 \log z - i \frac{3\pi}{4}$ (d)	None of these
(19)	f (z) = y + i x is: (a) Analytic inside the circle z = 1 (c) Is analytic everywhere.	(b) Not analytic in any domain (d) None of these
(20)	Every meromorphic function of Z is: (a) monogeric (c) has only poles as singularities	(b) holomorphic (d) None of these

MAXIMUM MARKS: 100

COMPETITIVE EXAMINATION FOR RECRUITMENT TO POSTS IN BPS-17, UNDER THE FEDERAL GOVERNMENT, 2005

PURE MATHEMATICS, PAPER-I

	NOTE:	Attempt FIVE questions in all, including QUESTION NO.8 which is COMPULSORY. Select TWO question from each SECTION, all questions c EQUAL marks.	arry
		SECTION - I	
l -		homomorphism of a group G into a group G with kernel K, prove that ormal subgroup of G.	10
	(b) If G is a	group, then A(G), the Set of all automorphisms of G, is also a group.	10
!-		commutative integral domain with unity and has finite characteristic that n is prime number.	08
	(b) If R in a maxima	commutative ring with unity and M is an ideal of R, prove that M is a lideal of R if and only if R/M is a field.	12
		a subspace of finite-dimensional vector space V, prove that $\leq \dim V$ and $\dim V/W = \dim V - \dim W$.	08
	(b) Let	A be an $n \times n$ matrix prove that det A=0 if and only if rank A is less than n.	12
	(5-K)	It values of K the equations $x_1 + 4x_2 + 2x_3 = 0$ $(x_1 + 4x_2 + 2x_3) = 0$. 08
	•	$x_2 + (2 - k)x_3 = 0$ n-trivial solutions. Find the solutions.	
	Transfor	e finite dimensional vector space over a field F and A(V) the algebra of linear mations on V. prove that $\lambda \in F$ is an eigen value of I if and only if $\nu T = \lambda \nu$ for some $\nu \neq 0$ in V.	12

Conta.....

10

SECTION - II

- (a) Find the pedal equation of the cardiode $r = a(1 + \cos \theta)$. 5-10 (b) Find the center of curvature of the parabola $x^2 = 4y$ at the point (4,1). (a) Find the volume of a tetrahedron whose vertices are (1,-1,2), (2,0,1) (0,-2,1) and 10 6-(-2,2,1)(b) The normal at a point P of the ellipsoid $\frac{x^2}{a^2} + \frac{y^2}{b^2} + \frac{z^2}{c^2} = 1$ meets the 10 coordinates planes in G_1, G_2, G_3 respectively. Prove that the ratios $PG_1: PG_2: PG_3$ are constant. (a) Define the involute and evolute of a space curve. Prove that the tangent to the 10 7involute is parallel to the principal normal to the given cutve. (b) If the curve of intersection of two surfaces is a line of curvature on both, prove 10 that the surfaces cut at a constant angle. (a) Write only the correct choice in the answer book. Do not reproduce the less than n.
 - The additive group of all rational number is: (i) ·
 - (a) Torsion free
 - (b) Finitely generated
 - (c) Cyclic
 - (d) None of these.
 - Every group of order 25 must be (ii)
 - (a) Cyclic
 - (b) Nonabelian
 - (c) Abelian
 - (d) None of these.
 - The order of the permutation $\begin{pmatrix} 1 \\ 4 \end{pmatrix}$ (iii)
 - (a) 5
 - (b) 6
 - (c) 7
 - (d) None of these.

Coutd...

- (x) The equation of the surface of revolution obtained by rotating the curve $x^2 + 2y^2 = 8$, z = 0 about y axis is
 - (a) $x^2 + 2y^2 + 2z^2 = 8$
 - (b) $x^2 + 2y^2 + z^2 = 8$
 - (c) $x^2 + 2z^2 = 8$
 - (d) None of these.
- (xi) If the tangent at a point P on a parabola meets the directrix in K, then angle KSP (S focus) is
 - (a) Right angle
 - (b) Straight angle
 - (c) Obtuse angle
 - (d) None of these
- (xii) The sum of the focal distances of a point P on an ellipse is
 - (a) Variable with P
 - (b) Greatest when P is at an end of major axis
 - (c) Constant
 - (d) None of these.
- (xiii) If field F has finite order q, then for every $a \in F$,
 - (a) $a^{q-1} = 0$
 - (b) $a^{q} = a$
 - (c) $a^q = 0$
 - (d) None of these.
- (xiv) Let A be an n x n matrix. Then det A=0 if and only if
 - (a) Rank A (n
 - (b) Rank A) n
 - (c) Rank A=n
 - (d) None of these.
- (xv) A square matrix A such that $A^{n} = 0$ for some positive integer n is called
 - (a) Idempotent
 - (b) Involutory
 - (c) Nilpotent
 - (d) None of these.

Contd.....

PURE MATHEMATICS, PAPER-1:

	STATE OF THE STATE
(iv)	If a group G has finite order divisible by n then
	(a) G contains a subgroup of order n
	(b) G contains an element of order n
	(c) G need not contain an element of order n.
	(d) None of these.
(v)	The multiplicative group of non zero elements of a finite field is
i.	(a) Of prime order
	(b) Of prime power order
	(c) Cyclic
	(d) None of these.
(vi)	The envelope of the normal plane of a twisted curve is calleddevelopable
	(a) Osculating.
	(b) Polar.
	(c) Rectifying.
	(d) None of these.
(vii)	The Gauss curvature of a surface at any point is the of the principal curvatures.
	(a) Difference
	(b) Sum
	(c) Product
	(d) None of these.
(viii)	The theorem $Kn = K\cos\theta$ connecting normal curvature in any direction with the curvature of any other section through the same tangent is called.
	(a) Meunier's theorem.
	(b) Euler's theorem.
	(c) Dupin's theorem.
	(d) None of these.

The envelope of the family $x^2 + y^2 - 4az + 4a^2 = 0$ is

(ix)

(a) $x^2 + y^2 = yx$ (b) xyz = 1(c) $x^2 + y^2 = z^2$

(d) None of these.

(xvi) Let $f: V \to W$ be a linear map where v is finite-dimensional, then

- (a) dim W=dim V + dim (Kerf)
- (b) dim V=dim(Kerf) + dim (imf)
- (c) $\dim V = \dim W + \dim (\inf)$
- (d) None of these.

(xvii) The perpendicular distance of the point (2,2,1) from the line

$$\frac{x-1}{2} = \frac{y+1}{3} = Z$$
 is

- (a) 2
- (b) 3
- (c) $\sqrt{\frac{5}{7}}$
- (d) None of these.

(xviii) The cylindrical coordinates of a point with spherical polar coordinates

$$\left(3,\frac{\pi}{6},\frac{\pi}{4}\right)$$
 are

- (a) $\left(\frac{3}{\sqrt{2}}, \frac{\pi}{6}, \frac{3}{\sqrt{2}}\right)$
- (b) $\left(\frac{3}{4}, \frac{\sqrt{2}}{3}, 6\right)$
- (c) $\left(2, \frac{\pi}{2}, l\right)$
- (d) None of these.

(xix) A set of 4 vectors in a 3-dimensional vector space must be

- (a) Linearly independent
- (b) A basis
- (c) Linearly dependent
- (d) None of these

(xx) If A,B are matrices such that AB exists and is the zero matrix, then

- (a) A must be zero matrix.
- (b) B must be zero matrix.
- (c) Neither A nor B need be zero matrix
- (d) None of these.

COMPETITIVE EXAMINATION FOR RECRUITMENT TO POSTS IN BPS-17, UNDER THE FEDERAL GOVERNMENT, 2005

PURE MATHEMATICS, PAPER-II

TIME ALLOWED: THREE HOURS

NOTE: Attempt FIVE questions in all, including QUESTION NO.8 which is COMPULSORY. Select TWO question from each SECTION, all questions carry EQUAL marks. SECTION -(a) Evaluate : $\lim_{x \to 0} \frac{e^{xx} - e^{-xx}}{\ln(1+x)}$ 06 06 (b) If f is continuous on [a,b] and differentiable on (a,b), then there exist a number C in (a,b) such that f(b) - f(a) = b - a f'(c). 08 (c) If \sum an converges absolutely, prove that \sum an converges. Give an example to show that the converse is not true. 2 08 (a) By evaluating both repeated integrals show that: $\iint_{0}^{1} \int_{0}^{1} \frac{x-y}{(x+y)^{3}} dy dx \neq \iint_{0}^{1} \int_{0}^{1} \frac{x-y}{(x+y)^{3}} dx dy$ 06 (b) Find the whole length of the cardioid $r = a (1+\sin\theta)$. (c) Let $\sum_{n=0}^{\infty} Mn$ be a convergent series of positive term, and let $|f_n(x)| \le 1$ 06 M_n for all x in [a,b] and all n. prove that $\sum fn(x)$ converges uniformly in [a,b]. (a) Let f be Riemann integrable on [a,b] and let, F(x) =10 Prove that F is Continuous on [a,b]. if f is continuous at a point c in (a,b), prove that f'(c) = f(c). (b) let $f(x, y) = \frac{xy}{\sqrt{x^2 + y^2}}$ when $(x, y) \neq (0, 0)$ and f(0, 0) = 010 prove that f is continouse possesses partial dervatives but is not differentiable at (0,0).

Contd....

(a) Let x,y be metric spaces, $f: x \to y$ a function and $C \in X$. Prove that f is continous at C if and if $\lim_{n\to\infty} f(xn) = f(C)$

whenever $(x_n \text{ is a sequence in } x \text{ coverging to } C.$

(b) let (x,d) be a metric space. Define the term: Cauchy sequence and completeness. Prove that if (x,d) is complete and A is a closed subset then (A,d) is also complete. If A is a compact subset of X, is (A,d) complete ? justify your answer.

10

Section -II

(a) Use De Moivre's Theorm to prove that 5

08

$$\sum_{k=0}^{8} \cos(\frac{2k\pi}{9}) = 0$$

(b) Let
$$f(Z) = \begin{cases} 0, & z = 0 \\ u(x, y) + iv(x, y), & z \neq 0, \end{cases}$$

12

where
$$u(x, y) = (x^3 - y^3)/(x^3 + y^2)$$

 $v(x, y) = (x^3 + y^3)/(x^2 + y^2)$

Show that the cauchy-Riemann equations are satisfied at the origin but f'(0) does not exit.

(a) State and prove Liouville's theorem. 6

06

(b) Use cauchy integral formula to evaluate $\int_{c}^{9z^{2}-iz+4} \frac{dz}{z(z^{2}+1)} dz$, where c is the circle |z|=2 in the positive direction. 08

(c) Use Taylor's series, prove that:

06

$$\frac{1}{z^2} = \frac{1}{4} \sum_{n=0}^{\infty} (-1)^n (n+1) \left(\frac{z-2}{2}\right)^n for (|z-2| < 2).$$

(a) Find the residues of tan z at its poles. 7

10

(b) Use the method of residues to evaluate $\int e^{\cos\theta} \cos(\sin\theta - 3\theta) d\theta$

10

PURE MATHEMATICS, PAPER-II:

-4.

(vii)
$$f(x) = \frac{\sin x}{x}$$
, $x \in (0, \frac{\pi}{2})$, is

- (a) strictly increasing
- (b) strictly decreasing
- (c) unbounded.
- (d) None of these

(iii)
$$\lim_{n\to\infty} (1+\frac{x}{n})^n equals$$

- (a) 1
- (b) Dosc not exit
- (c) ex
- (d) None of these.
- (ix) Suppose $f(x) = \sum_{n=0}^{\infty} Cnx^n$, where the series is convergent for all |x| < R, then f is
 - (a) continous but not differentiable
 - (b) differentiable
 - (c) monotonic
 - (d) None of these.
- (x) The interval (0,1) is
 - (a) A countable set.
 - (b) A copmpact set
 - (c) An uncountable set
 - (d) None of the above.

(xi) Let
$$e = \lim_{n \to \infty} (1 + \frac{1}{n})^n$$
 then e is

- (a) Rational
- (b) Irrational
- (c) Algebraic
- (d) None of these

(xii) The series
$$\sum_{n=1}^{\infty} \frac{1}{n! + \frac{1}{n}} is$$

- (a) convergent
- (b) oscillating
- (c) divergant
- (d) None of these
- (xiii) the function $f(z) = z^2 e^{-z}$ is
 - (a) Entire.
 - (b) meromorphic
 - (c) bounded
 - (d) None of these.

COMPULSORY OUESTION

- 8. write only the correct choice in the answer book. Do not reproduce the question.
- (i) for all real number a, Limit a/n equals
 - (a) (
 - (b) «
 - (c) 1
 - (d) none of these.
- (ii) the series $\sum_{x=1}^{\infty} \frac{(-1)^x}{x} is$
 - (a) divergent.
 - (b) Convergent.
 - (c) Absolutely convergent.
 - (d) None of these.
- (iii) If f is Riemanns integrable on [a,b], the f must be
 - (a) Continous on [a,b].
 - (b) Differentiable on [a,b].
 - (c) Monotonic on [a,b].
 - (d) None of these.
- (iv) Every closed subset of R, the real line, is
 - (a) Complete.
 - (b) Compact.
 - (c) Bounded.
 - (d) None of these.
- (v) The series $\sum_{n=1}^{\infty} \frac{\sin n}{n^2}$ is

Convergent but not absolutely.

- (a) Absolutely convergent.
- (b) Divergent
- (c) None of these.
- (vi) $\lim_{x \to \infty} x^n e^{-x}$ (x = 1,2,3,.....) equals
 - (a) 0
 - (b) 1
 - (c) ∝
 - (d) None of these.

Cantd....

- (xiv) The converse of cauchy integral theorem is known as
 - (a) Goursat theorm
 - (b) Morera theorm
 - (c) Cauchy's inequality.
 - (d) None of these.
- (xv) A simple closed curve divides the complex palne into _____ disjoint domains
 - (a) Two.
 - (b) Three
 - (c) Four
 - (d) None of these
- (xvi) If a series of complex numbers $\sum_{n=1}^{\infty} z_n$ converges, then $\lim_{n\to a} (-1)^n zn$ is
 - (a) -1
 - (b) Zero
 - (c) 1
 - (d) None of these.
- (xvii) $\lim_{n\to\infty} \frac{(n-i)^3}{2n^3+n+2}$ equals
 - (a) ∝
 - (b) $\frac{1}{2}$
 - (c) zero
 - (d) None of the
- (xviii) Log $(-1+i) = 1/2\log 2 + iQ$, where Q equals
 - (a) $\frac{3}{4}$
 - (b) -3/4
 - (c) -1/4
 - (d) none of these
- (xix) Every compact subset of the complex plane is
 - (a) Open.
 - (b) Closed and bounded.
 - (c) Open and unbounded.
 - (d) None of these.
- (xx) If z is not an integer, then $\pi(z)\pi(1-z)$ equals
 - (a) 1
 - (b) $z\pi(z)$
 - (c) $\frac{n}{\sin \pi z}$
 - (d) None of these.
